WORK EXPERIENCE

Frontend Developer Qubitars Technologies

02/2024 - Present

Gujranwala

Qubitars Technologies is a custom software development company based in Gujranwala, Pakistan. Established in 2021, they specialize in web development, mobile app development, custom software development, and UX/UI design. The company works with industries such as financial services, healthcare, entertainment, and real estate, offering solutions to small and midmarket businesses. Their team uses modern technologies like React.js, Next.js, Vue.js, and Node.js to build responsive, SEO-optimized websites and applications aiming for business growth and engagement.

Achievements/Tasks

- I was responsible for the development and maintenance of user interfaces for web applications utilizing ReactJS and Next.js.
- Collaborated closely with highly skilled UX/UI designers to skillfully translate detailed wireframes and vivid mockups into visually stunning, high-quality, and seamlessly responsive web pages.
- I've implemented state management using Redux Toolkit, significantly improving application scalability and performance by optimizing state handling and minimizing unnecessary re-renders for a more responsive user experience.
- In pursuit of excellence, I have successfully established a TurboRepo environment, integrating a Next.js application with a common React shareable component library.
- I've implemented RESTful APIs to integrate external services seamlessly and optimized data fetching techniques for improved application efficiency and performance.
- Collaborated closely with back-end developers to ensure the seamless integration of APIs and data structures, resulting in a robust and efficient system that enhances overall performance.
- I used Git for version control to keep track of changes in the code. I also managed pull requests and took part in code reviews to ensure that we followed best practices.

RECENT PROJECTS

Show Republic (07/2024 - Present)

- A social application is being built with Next.js, Bootstrap, and TurboRepo.
- Users can upload and share multimedia content, discover new creators, and follow their favorite shows.
- Managed with Turborepo, ensuring efficient and scalable development workflows.
- Includes a theme toggle feature, allowing users to switch between light and dark modes for better readability.

Jusoor News (05/2024 - 06/2024)

- Built with Bootstrap for a mobile-first, user-friendly interface.
- Fetches and displays the latest news from multiple categories using external APIs.
- Uses Redux Toolkit for managing the state of articles, categories, and user preferences.
- Users can filter news by categories for a personalized reading experience.
